🔗 Portfolio

Career Objective

Driven by a passion for purposeful innovation, I am focused on evolving into a versatile software engineer with strong expertise in developing data-centric and AI-powered systems. With a foundation in full-stack development, I aim to build intelligent, scalable, and intuitive digital solutions that enhance user experience and deliver meaningful impact. I am committed to continuous learning, ethical innovation, and impactful problem-solving. Through technical excellence and purposeful collaboration, I strive to lead initiatives that advance technology and address real-world challenges with clarity, efficiency, and long-term value.

Education

2023 – Present	BSc (Hons) Computing <i>Islington College London Metropolitan University</i>
2020 – 2022	SLC <i>Kathmandu Modal College NEB (National Examination Board)</i>
2020	SEE <i>Jeevan Tara Academy NEB (National Examination Board)</i>
Aarubari, Gokarneshowr	

Professional Experience

06/2025 – 09/2025	Full Stack Developer Intern
Chandol-4, Kathmandu	I was part of core banking system (CBS) development team, working across the stack with .NET, ASP.NET Core MVC, Dapper and PostgreSQL. I contribute to transactional modules, build RESTful APIs and Razor UIs, implement role-based access, optimize database performance and handle logging, error management and testing secure, reliable real time banking solutions for Nepali financial institutions.

Skills

Technical Skills

• C# • .NET / ASP.NET Core • JavaScript • React.js • HTML & CSS • SQL • MySQL • PostgreSQL • SQL Server • Machine Learning • Data Analysis • Data Visualization • RESTful API Development • Responsive Web Design • Version Control (Git, GitHub)

Soft Skills

• Effective Communication • Leadership • Critical Thinking • Problem Solving • Team Collaboration • Time Management • Adaptability • Creativity

Personal Project

Research Project (Ongoing): AI Coding Assistants in Programming Education

Conducting research as part of a team on the impact of AI coding assistants on undergraduate programming education, focusing on learning outcomes, programming competence, problem-solving skills, and student perceptions. Contributing to literature review, survey design, interviews, and data analysis.

AgriScan [↗](#)

AI-Powered Crop Disease Detection System Developed a mobile web application using React.js and Python FastAPI that uses a fine-tuned EfficientNetB0 model (93% accuracy, 39 classes) to detect crop diseases from leaf photos. Integrated rembg background removal, Groq LLM for dynamic treatment recommendations, and gTTS for Nepali voice output — designed for low-literacy farmers in rural Nepal with zero login friction. Tech Stack: React.js | Python | FastAPI | TensorFlow | Groq API | gTTS

Academic Projects

LearnBox [↗](#)

Developed LearnBox, an AI-powered educational platform that centralizes learning resources, semantic search, assessments, and progress tracking. Implemented using React, TypeScript, Node.js, Express.js, and PostgreSQL with role-based access control and AI integration.

Heart Disease Prediction System Using Machine Learning [↗](#)

Designed and implemented a Heart Disease Prediction model using supervised machine learning techniques.

Vehicle Parts Management System (VPMS) [↗](#)

Full-stack inventory and service management application built with ASP.NET [↗](#) Core 8.0 and React. Developed comprehensive features including vendor/customer management, financial reporting, role-based access control, and real-time appointment scheduling for a vehicle parts distribution platform.

JournalMate [↗](#)

Full-stack journaling application developed using .NET MAUI Blazor Hybrid. Implemented security features (PIN authentication, data encryption), database management (SQLite), Razor components for responsive UI, cross-platform deployment, and modern design patterns.

React Full Stack [↗](#)

Built a full-stack web application using React for the frontend and Node.js/Express for the backend, implementing clean component structure, API integration, and scalable project organization.

KumariCinemas [↗](#)

Created a full-stack cinema management web application using ASP.NET [↗](#) Web Forms and Oracle Database that manages theatres, movies, shows, and ticket bookings. Implemented key features such as automated ticket cancellation modules, real-time occupancy monitoring, and a user-friendly responsive UI with Bootstrap, serving as the central platform for theatre operations.

Rental Management System [↗](#)

Led the development of a sophisticated Python program for TechnoPropertyNepal, enabling efficient management of land rental operations through seamless record handling and an intuitive user interface for transaction processing.

Java User Interface [↗](#)

Developed a teacher information management system using Java and Swing, integrating a graphical user interface with an ArrayList-based backend to manage teacher records efficiently through object-oriented design principles.

Dynamic Website Development (Cliniterra) [↗](#)

Built a responsive clinic management system using Jakarta EE and a relational database, enabling secure backend services, patient-doctor interactions, and efficient admin management of profiles and appointments.
